

NoSpamProxy is the 2017 champion of independent user surveys

In the independent user survey by analyst firm techconsult, NoSpamProxy gets excellent marks and is crowned as champion in the e-mail security segment.

Paderborn, January 26, 2017 – Net at Work GmbH, manufacturer of the modular secure e-mail gateway solution NoSpamProxy from Paderborn, announces that NoSpamProxy has been crowned as champion of the Professional User Rating Security Solutions 2017 (PUR-S 2017) by the analyst firm techconsult. The Paderborn software company thus beat out many relevant e-mail security providers. The independent and vendor-neutral evaluation is based on comprehensive feedback from active customers and users.

NoSpamProxy wins in terms of customer reviews

Customer reviews are crucial

The survey design focuses solely on feedback from customers actually using the respective solutions. More than 2,400 detailed user interviews were conducted on eight solution areas for the survey. A total of 670 interviews were evaluated for the e-mail security sector. 23 of the 45 potential providers identified for Germany had so many informative customer reviews that they were considered relevant to the market and included in the analysis.

Security Solutions

Net at Work impresses both functionally and technically with NoSpamProxy and as a partner-like provider.

NEWS / press release

NoSpamProxy clearly stood out from its sometimes larger and better-known competitors, in terms of evaluating the solution and technology approach as well as the company as a partner. Thanks to its very good customer reviews, NoSpamProxy is thus the only German product to receive the top rating as a champion. Only two companies were honored as champions - neither of which is a major US provider.

“What makes the Professional User Ranking special is the focus on real customer reviews. Rather than abstract, formal criteria and analyst opinions, what counts here is how well a solution proves itself in the everyday practice,” says Henrik Gross, Senior Analyst at techconsult. “NoSpamProxy’s very good ranking is based on the fact that customers and users are all impressed by the product’s performance in everyday use and see Net at Work as a reliable and innovative partner.”

Customer benefit is all that counts in the end

As a medium-sized provider, Net at Work focuses on impressing with a high-performance product and the best possible service. For this, Net at Work seeks close cooperation with its customers before and after the acquisition of the solution. This facilitates the immediate recognition of small and large potentials for improvement in everyday use. As development takes place entirely in-house in Paderborn, customer requirements and technical innovations can be incorporated into the product very quickly. An example of this is the extension disclaimer, which was developed at the request of customers and can be centrally managed with the marketing disclaimer in the e-mail footer.

“The only thing that really counts for us in the end is the extent to which our products help customers manage the growing dangers posed by e-mail traffic,” says Uwe Ulbrich, Managing Director of Net at Work, explaining the corporate principle. “Our work focuses on the topic of e-mail security. This enables us to bring together the best anti-spam/anti-malware and e-mail specialists, while not getting distracted by other products or areas needing improvement. We can thus pay attention to the details that make our solutions better for our customers’ everyday use than other products.”

“This award is particularly important to us because it is based on the evaluation of customers and users,” says Ulbrich, referring to the company’s performance in the Professional User Ranking by techconsult. “Our close and cooperative dialogue with many customers often brings us very positive feedback about our product, but seeing how satisfied our customers are of us in the context of an independent comparison to the competition makes us particularly proud.”
