isarpatent advises clients worldwide on patents, copyright and brand protection. Reliable and confidential with the Secure Mail Gateway NoSpamProxy Encryption from Net at Work.

Enrypting email traffic fully automatic

The Munich based law firm isarpatent is specialized on patent law and is offering its global client base all services needed in national and international legal protection for patents, copyrights and brands. To ensure an end-to-end protected email communication with clients Net at Work has implemented the encryption module of its NoSpamProxy gateway.

NoSpamProxy Encryption is encrypting all critical emails based on personal certificates using PGP or S/MIME – fully automated and in the background. Employees of the law office don't have to take any manual action.

Unparalleled security and competitive advantage

NoSpamProxy Encryption is encrypting the complete outbound email traffic at isarpatent. The Secure Mail Gateway is supporting both PGP keys and S/MIME based certificates. In order to establish a secure email communication channel with new clients which do not have yet a personal certificate or PGP key, isarpatent is providing a certificate to clients as part of their client service. The software is able to request these keys via a direct link from the connected trust center and therefore the majority of clients have been connected with little effort. Clients appreciate this innovative service and isarpatent is able to effectively differentiate itself from competitors. The encryption is performed fully transparent in the background on the gateway. There is no need for internal users to take manual action and there is no risk that a critical piece of information is sent accidently without encryption.

In addition to high transparency and user friendliness putting the encryption functionality on a central gateway demonstrated already during the evaluation several further advantages: the biggest plus for isarpatent is that internally all emails are available unencrypted. This greatly simplifies searches and requests as well as archiving of the complete client communication.

Benefits
- Automated encryption with PGP or S/MIME
- No manual effort
- Simple and automated addition of keys
- Intuitive Microsoft MMC style user interface

The Secure Mail Gateway NoSpamProxy® is available with following modules: Protection to protect from Spam, Phishing and Malware, the Encryption module for easy encryption of emails, and Large Files for secure and easy transfer of large files. In combination NoSpamProxy ensures the complete protection of your corporate email communication. Centrally on Microsoft Server, easy, secure, economic.
