Customisable email disclaimers.

NoSpamProxy® offers more than email security

Keeping email disclaimers consistent and up to date is a constant challenge for IT departments. Their realisation still ties up resources unnecessarily or must be achieved using niche tools that have to be maintained as an extension of the respective email server. The secure email gateway NoSpamProxy solves these issues elegantly, making the purchase of additional software redundant.

Unlock the full potential of email disclaimers

The customisation of email disclaimers often fails due to a lack of capacity in the IT department which is unable to implement marketing requirements quickly. As a result, opportunities are likely to be missed, for example, to draw attention to events, new products or promotional offers. NoSpamProxy Disclaimer includes a web interface that allows marketing staff to manage, design and modify disclaimers autonomously. By selecting attributes from Active Directory groups it is possible to maintain different disclaimer texts for different teams or departments. This relieves the IT administration effectively, allowing the company to exploit the full advertising potential of email disclaimers.

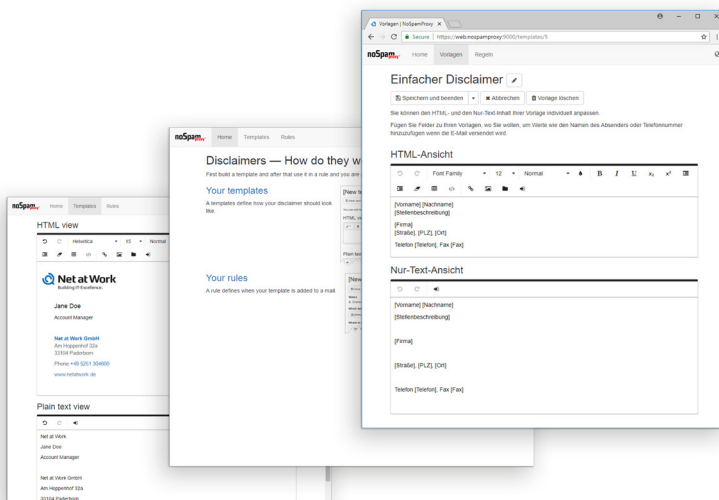

A simple way to reduce the workload of your IT administration

With NoSpamProxy Disclaimer, the competition between marketing and IT departments finally comes to an end. The implementation of this important, cost-effective and powerful marketing instrument is no longer a source of friction. Among the benefits for companies is the fact that the IT administration is relieved of the burden of implementing marketing ideas into email disclaimers. The time gained can be used to advance other important projects and thus increases the agility of the IT department and the entire company.

The NoSpamProxy Disclaimer allows you to add disclaimer management capabilities to the NoSpamProxy email security gateway. As a result, NoSpamProxy customers avoid installing additional software products on their Exchange server.

Independent of Exchange server versions

The downside of many email disclaimer solutions installed directly on the email server or Exchange server is the need to update in the course of an Exchange migration. This requires a new purchase, reinstallation and reconfiguration. Since the NoSpamProxy Disclaimer runs as a stand-alone gateway independent of the email server used, there is no or significantly lower expenditure.

Ensure legal compliance and automatically adhere to corporate policies

Many companies use the disclaimer functionality of email clients or email servers such as Microsoft Outlook or Microsoft Exchange. In these cases, it is the responsibility of individual users to correctly implement the texts and graphics specified by the corporate communications or marketing departments. Frequently, these texts and graphics are changed arbitrarily, resulting in the company not displaying a uniform corporate identity. In even more serious scenarios, clauses on the exclusion of liability are not adopted, possibly leading to third-party compensatory claims.

Perfect synergy between NoSpamProxy® Disclaimer, Encryption and Protection

If you use NoSpamProxy not only to create and manage email disclaimers, but also for the secure transfer of large files, for email encryption and for protection against spam and malware, you will gain added security:

- Just like the management of the Disclaimer function, the modules Protection, Encryption and Large Files are controlled via Active Directory. This results in significantly reduced maintenance efforts for the individual modules and a simplified workflow for the administrator.
- Smart integration with NoSpamProxy Protection: Sending large attachments with NoSpamProxy Large Files is especially useful for NoSpamProxy customers who already use the CDR function (Content Disarm and Reconstruction) to ensure enhanced security when receiving emails. For example, CDR can convert a Word file into a PDF file and deliver a macro-free version of the content to the recipient. When combined with NoSpamProxy Disclaimer, the original document can also be quarantined.
- Thresholds for rejecting messages suspected of being spam or malware can be increased if regular communication with business partners is encrypted and signed.
- Spam and malware scanning can be efficiently performed at the same gateway used to decrypt emails. If other solutions are used, re-routing is required, resulting in loss of time and performance.
- The same Web Portal is used for smart attachment management, for the Content Disarm and Reconstruction feature as well as for the Large Files module. The handling of large files and different file types is equally customisable.
- NoSpamProxy Disclaimer also builds on the Level of Trust technology: You can easily specify whether attachments from known communication partners are directly sent to the recipient and only attachments of unknown communication partners are added to the quarantine.
- Additional benefits by coordinating the functionalities of the NoSpamProxy modules.

Easy-to-use web interface

NoSpamProxy Disclaimer includes a web interface that allows authorised employees, for example from the marketing department, to autonomously manage, design and modify email disclaimers.

Get started quickly with templates

Use a variety of templates to quickly create and customise email disclaimers.

For teams and individual users

Create your custom disclaimers for departments, teams, one-off campaigns or trade fairs.

Rule-based and easy to use

Define specific conditions for the sending of disclaimers.
